DEATHS:

The above VAERS data set downloaded 20-March-2021 shows that 1642 out of 27,995 died following covid vaccination, i.e. 5.87%

MISCARRIAGES:

The above pregnant women that suffered miscarriage represent 63 of 19,827 women vaccinated

Filtering the VAERS data for females of reproductive age between 17 - 45, we see that there were 8,263 females of reproductive age vaccinated for Covid-19

The CDC says that at any given time 5% of females of reproductive age are pregnant - source citation: <https://www.cdc.gov/reproductivehealth/Emergency/PDFs/PregnacyEstimateBrochure508.pdf>

5% of the 8,263 females of reproductive age vaccinated = 413 were probably pregnant

This implies that $63/413 \times 100\%$ i.e. 15.25% of pregnant women are miscarrying after covid vaccinations

No doubt these women are told the same thing as everyone else suffering adverse vaccine reactions: that is was "just an unfortunate coincidence and unrelated to the vaccine".
